This is one of our EZ2 series brackets, which allows the visible front portion of the bracket to be easily removed from the front of the vehicle (Fig.A and Fig.B). The bracket consists of a main receiver brace, two removable front braces, two center braces and a hardware pack.

The main receiver brace mounts to the frame rails and the bumper core. The removable front braces install in the main receiver brace.

Before starting the installation, lay out the kit components in order, as they will be used. This will give you a visual idea of how the components work, and will also confirm that everything is present and accounted for.

**IMPORTANT:** All brackets **must** be assembled with all the bolts left loose for final adjustment and positioning (before tightening) unless otherwise instructed. All bolts **must** be torqued for proper strength. If more than one bolt is used per fastening point, the diagram may only show one.

- **Use flat washers over all slotted holes**
- **Use lock washers on all fasteners**

**WARNING**

- Do not use this document for custom fabrication, as it may not show all parts or structural components. Custom fabrication or an attempt to copy this bracket design could result in loss of the towed vehicle.
- The owner must inspect all mounts and brackets before each use for cracks or other signs of fatigue. Also, inspect the fasteners for proper torque, according to the bolt torque requirements chart on the last page. Failure to do so could result in loss of the towed vehicle.
- The owner must check the manufacturer's instructions for the proper procedure(s) to prepare the vehicle for towing. Some vehicles must be equipped with a transmission lube pump, an axle disconnect, driveline disconnect or free-wheeling hubs before they can be towed. Failure to properly equip the vehicle will cause severe damage to the transmission.
- The installer must read the instructions and use all bolts and parts supplied. Failure to securely fasten the bracket could result in loss of the towed vehicle.
- If running changes were made by the vehicle manufacturer after this bracket was designed, some bolts or other fasteners in the included hardware pack may no longer be the correct size. It is the installer's responsibility to verify that the bracket is securely fastened to the vehicle, and fitted with the correct hardware, to account for these changes. Failure to securely fasten the bracket could result in loss of the towed vehicle.
- If the towed vehicle has been in an accident, it must be properly repaired before attaching the bracket. Do not install the bracket if any structural frame damage is found. Failure to repair the damage may result in the loss of the towed vehicle.
- Some motorhome chassis have such a tight turning radius that you can damage your motorhome, towed vehicle, tow bar or bracket while turning sharply. Before getting on the road, test your turning radius in an empty parking lot. Turning too sharply could result in non-warranty damage to towing system, motorhome and/or towed vehicle.
- Do not back up with the towed vehicle attached or non-warranty damage will occur to your towing system, motorhome and/or towed vehicle.
- The safety cables must connect the towing vehicle to the towed vehicle frame to frame, with the cables crossed, with enough slack for sharp turns. Refer to the cable instructions for proper routing. Failure to leave enough slack in the safety cables, or failure to connect the safety cables frame to frame, will result in the loss of the towed vehicle.
- This bracket is designed for use with ROADMASTER tow bars and ROADMASTER adaptors only. Using this bracket with other brands, without an approved ROADMASTER adaptor, may result in non-warranty damage or injury.
- Upon final installation, the installer must inspect the bracket to ensure adequate clearance, particularly around hoses, air conditioner lines, radiators, etc., or non-warranty damage to the towed vehicle will result.
- This bracket is only warranted for the original installation. Installing a used bracket on another vehicle is not recommended and will void the warranty.

**WARNING**

Failure to follow these instructions can result in property damage, personal injury or even death.
1. Remove five plastic fasteners attaching the top of the fascia to the core support (Fig.C).
2. On each side, remove a Phillips head screw attaching the corner of the fascia to the fender (Fig.D).
3. Remove five plastic fasteners and four Phillips head screws attaching the bottom of the fascia to the splash shield (Fig.E).
4. Disconnect the fog lights, if the vehicle is so equipped. Pull out and forward to remove the fascia (Fig.F).
5. On each side, remove four 12mm (head) bolts attaching the bumper core to the end of the frame rail.

   Note: only three bolts are shown in Figure G. The fourth is to the inside of the bumper core.

   Note: the bumper core will not be replaced. Retain the bumper core and attachment hardware so that it can be replaced if the bracket is ever removed.
6. Place the main receiver brace over the ends of the frame rails. On each side, replace the four bolts removed in the previous step. *Note:* Figure H only shows three bolts. The fourth is below the brace.  

*Note:* use thread lock on the bolts. Torque the bolts to the bolt torque requirements found at the end of this document.

7. Locate the existing hole on the inside edge of the frame rail on each side (Fig.I – passenger side). Place a 5/8" lock washer and 5/8" clipped plate washer over one of the 5/8" x 1¾" bolts. Bolt through the existing hole on the inside edge of the frame rail and into the rear mounting point of the main receiver brace (Fig.J – passenger side).

8. Reassemble the fascia, reversing steps 1 through 4.

9. Trim the fascia using the red lines in Figure K as a guide for trimming. Figure L shows the completed trimming.
10. Insert the removable front bracket arms into the front receiver braces, and twist each one 90 degrees to lock.

11. Attach the 8” safety cables with the cable connectors (Q-Links) to the front of the receiver braces (Fig.M).

12. Attach the ends of the safety cables to the tow vehicle’s safety cables.

13. Install the tow bar to the mounting bracket according to the manufacturer’s instructions.

**BOLT TORQUE REQUIREMENTS**

Note: The torque values represented below are intended as general guidelines. Torque requirements for specific applications may vary. Roadmaster does not warrant this information to be accurate for all applications and disclaims all liability for any claims or damages which may result from its use.
